Big Data Stores

Azure
Data Lake store

Azure
SQL Data Warehouse

Azure
SQL Database
SQL Data Warehouse

SQL Database Service

- A relational **database-as-a-service**, fully managed by Microsoft.
- **Near-zero administration** and **enterprise-grade** capabilities

Elastic scale & performance

Predictable performance levels
Programmatic scale-out
Dashboard views of DB metrics

Business continuity & data protection

Self-service restore
Disaster recovery
Compliance-enabled

Familiar & self-managed

Familiar & compatible
Programmatic
Self-managed

Designed for predictable performance

Redefined

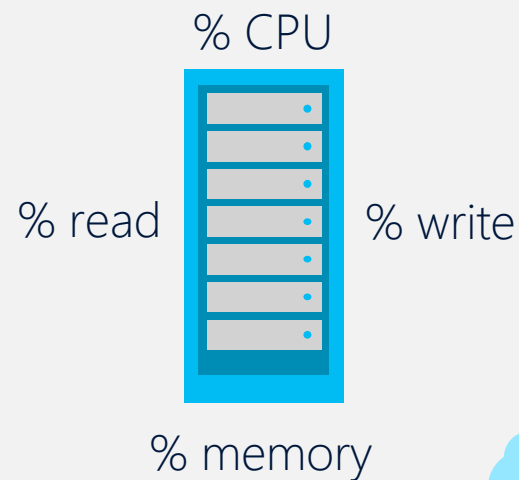

Across Basic, Standard, and Premium, each performance level is assigned a defined level of throughput

Measure of power

Database Throughput Unit (DTU) represents database power and replaces hardware specs

DTU is defined by the bounding box for the resources required by a database workload and measures power across the six performance levels.

Basic — 5 DTU	S0 — 10 DTU	P1 — 125 DTU
	S1 — 20 DTU	P2 — 250 DTU
	S2 — 50 DTU	P4 — 500 DTU
	S3 — 100 DTU	P6 — 1,000 DTU
		P11 — 1,750 DTU

Standard geo-replication

Opt-in business continuity for greater geo-redundancies

Opt-in for Standard & Premium databases

Creates a stand-by secondary

Replicate to pre-paired Azure region

Automatic data replication, asynchronous

Opt-in via REST API, PowerShell or Azure Portal

Microsoft-managed, RTO<24h, RPO<1 hr

Active geo-replication

Mission-critical business continuity on your terms, via programmatic APIs

Self-service activation in Premium

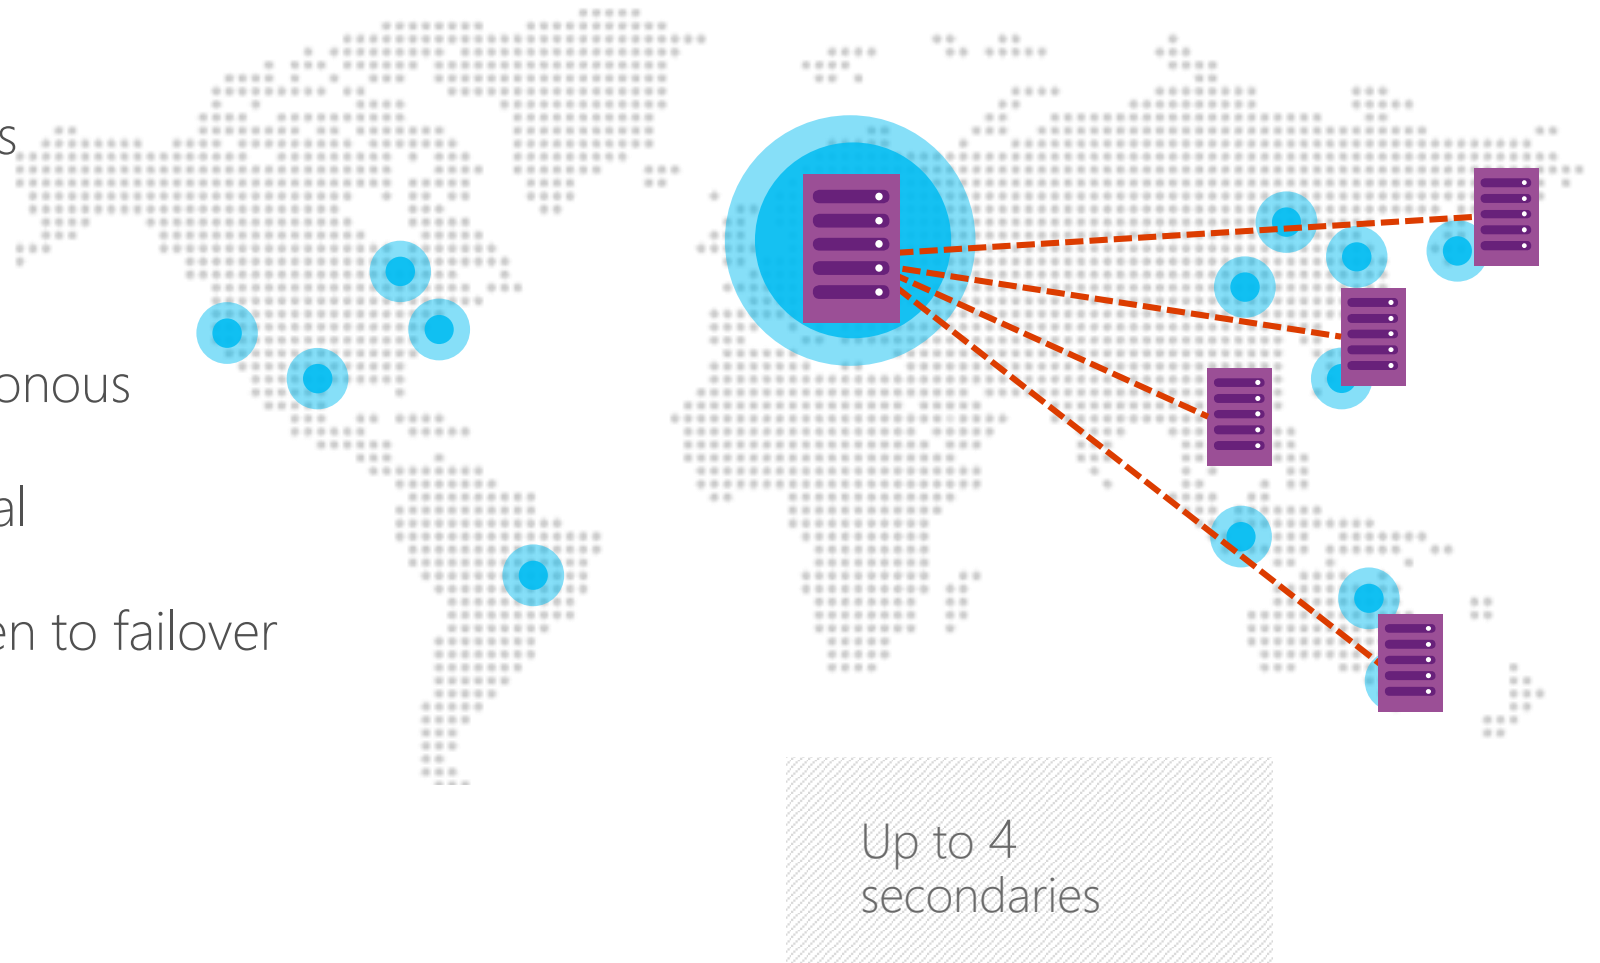

Create up to 4 readable secondaries

Replicate to any Azure region

Automatic data replication, asynchronous

REST API, PowerShell or Azure Portal

RTO < 1h, RPO < 5m, you choose when to failover

Point-in-time restore

Programmatic “oops recovery” of data deletion or alteration

Auto backups, transactional logs every 5 min

Backups in Azure Storage and geo-replicated

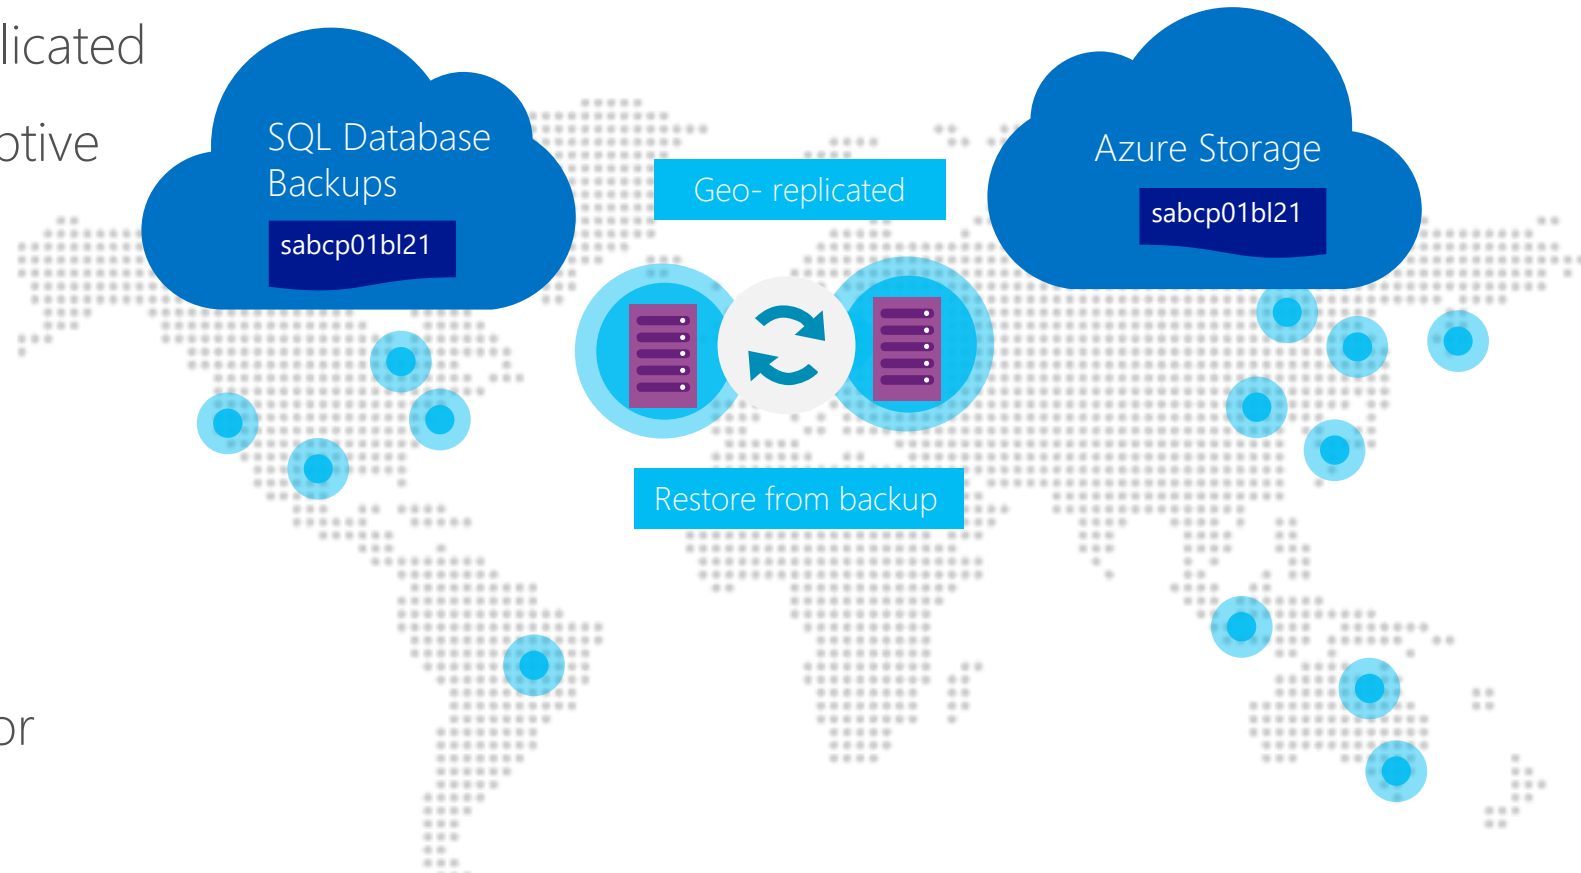

Creates a side-by-side copy, non-disruptive

REST API, PowerShell or Azure Portal

Backups retention policy:

- Basic, up to 7 days
- Standard, up to 14 days
- Premium, up to 35 days

Automated export of logical backups for long-term backup protection

Row-Level Security

Protect data privacy by ensuring the right access across rows

Fine-grained access control over specific rows in a database table

Help prevent unauthorized access when multiple users share the same tables, or to implement connection filtering in multi-tenant applications

Transparent Data Encryption

Protect sensitive data stored in a SQL database from unauthorized access

Encrypted-at-rest

SQL Database service manages your keys

Predictable encryption performance

Auditing

Gain insight into database events & streamline compliance-related tasks

Configurable to track & log database activity

Dashboard views in the portal for at-a-glance insights

Pre-defined Power View reports for deep visual analysis on Audit log data

Audit logs reside in your Azure Storage account

Introducing Azure SQL DW Service

A relational data warehouse-as-a-service, fully managed by Microsoft.
Industries first **elastic** cloud data warehouse with proven SQL Server capabilities.
Support your **smallest to your largest** data storage needs.

Elastic scale & performance

- Scales to petabytes of data
- Massively Parallel Processing
- Instant-on compute scales in seconds
- Query Relational / Non-Relational

Powered by the Cloud

Get started in minutes

Integrated with Azure ML, PowerBI & ADF

Market Leading Price & Performance

Simple billing compute & storage

Pay for what you need, when you need it
with dynamic pause

Elastic Scale

- Spin up for heavy workloads, cycle down for daily activity
- Buy time to insight based on what you need, when you need it
- Choose the combo of compute and storage that meets your needs

Pause & Restart

SMP vs MPP

Symmetric Multi-Processing access single shared memory, scale up (classic SQL)
Multi Parallel-Processing, shared nothing (Data warehouse)

Query unstructured data via Polybase/T-SQL

Capability

T-SQL for querying relational and non-relational data across SQL Server and Hadoop

Benefits

- ➔ New business insights across your data lake
- ➔ Leverage existing skillsets and BI tools
- ➔ Faster time to insights and simplified ETL process

Data Warehouse Units (DWUs)

Load rate

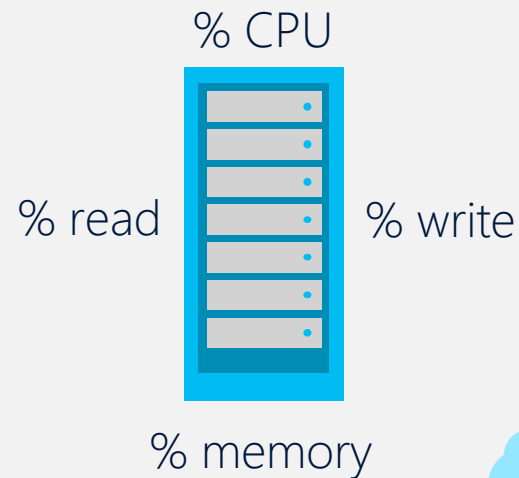

Number of records that can be loaded into the data warehouse per second

Scan rate

Number of records that can be sequentially retrieved from the data warehouse per second

SQL Data Warehouse introduces Data Warehouse Units (DWUs) as an abstraction of computational resources (CPUs, memory, storage I/O) aggregated across a number of nodes

Where does SQL DW fit?

existing services

SQL Server VM (IaaS)

OLTP / DW workloads
Lift and Shift
Customer managed

1-1TB+

Azure SQL Database

OLTP/ DW workloads
Net new development
Fully managed service

1-500 GB

Azure SQL Data Warehouse

DW workloads only
Fully managed
Dynamic compute scaling and pause

250GB – PB+

Azure Data Factory

A managed cloud service for building and operating data pipelines

Azure Data Lake

What is Azure Data Lake Store?

A highly scalable, distributed, parallel file system in the cloud specifically designed to work with multiple analytic frameworks

Azure Data Lake Analytics

All data

Productivity
from day one

Easy and
powerful data
preparation

Limitless scale

Enterprise-
grade

Azure Data Lake Analytics Service

A new distributed
analytics service

- Built on **Apache YARN**
- **Scales dynamically** with the turn of a dial
- **Pay by the query**
- Supports **Azure AD** for access control, roles, and integration with on-prem identity systems
- Built with **U-SQL** to unify the benefits of SQL with the power of C#
- Processes data **across Azure**

Work across all cloud data
